

## Lesson Plan Template

<b>Grade: High School</b>		<b>Subject: Math</b>	
<b>Materials: Pencil, textbook, notebook, calculator</b>		<b>Technology Needed: Computer</b>	
<b>Instructional Strategies:</b> <input type="checkbox"/> Direct instruction <input type="checkbox"/> Peer teaching/collaboration/ <input checked="" type="checkbox"/> <b>Guided practice</b> cooperative learning <input type="checkbox"/> Socratic Seminar <input type="checkbox"/> Visuals/Graphic organizers <input type="checkbox"/> Learning Centers <input type="checkbox"/> PBL <input type="checkbox"/> Lecture <input type="checkbox"/> Discussion/Debate <input type="checkbox"/> Technology integration <input type="checkbox"/> Modeling <input type="checkbox"/> Other (list)		<b>Guided Practices and Concrete Application:</b> <input checked="" type="checkbox"/> <b>Large group activity</b> <input type="checkbox"/> Hands-on <input checked="" type="checkbox"/> <b>Independent activity</b> <input type="checkbox"/> Technology integration <input type="checkbox"/> Pairing/collaboration <input type="checkbox"/> Imitation/Repeat/Mimic <input type="checkbox"/> Simulations/Scenarios <input type="checkbox"/> Other (list) Explain:	
<b>Standard(s)</b> 8.EE.7 – Solve linear equations in one variable 1. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions 2. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms		<b>Differentiation</b> <b>Below Proficiency:</b> If students are struggling with this content, I will go through their notes with them to see if they have the right definitions down. Then, I will find a similar problem to the one they are struggling on and walk them through that one first.  <b>Above Proficiency:</b> If students get finished quickly, they will be expected to check through their answers before having Mrs. Thompson or myself look over the assignments. They will then be expected to carry on to the next section or to work on other homework.  <b>Approaching/Emerging Proficiency:</b> The students will be expected to complete their assignment in a timely fashion and then make sure to check their answers if they have time.  <b>Modalities/Learning Preferences:</b> Auditory: The students will listen to the examples that we go through together as a class right before they start their assignments. They will also have the option to go back and watch the videos at any point.  Visual: The students will watch and follow along with the examples that we go through as a class. They will also have the option to go back and watch the videos at any point.  Kinesthetic: The students will be allowed to get up to check their answers no matter where they are at in the assignment. This will allow them to move around, but also see if they are understanding the material.  Interpersonal: The students will be working on the assignments the entire class period. This will allow them to receive one-on-one help from myself or Mrs. Thompson.	
<b>Objective(s)</b> 1. Combine like terms 2. Perform the distributive property  <b>Bloom's Taxonomy Cognitive Level:</b> Define, apply, solve			
<b>Classroom Management- (grouping(s), movement/transitions, etc.)</b> Students will be expected to work independently on their assignments when given the time to do so. Due to Covid-19, the students will be expected to be spaced out to the best that the room allows. They will be allowed to check their answers when they are done and are expected to do so in a respectful manner so others can continue to work.		<b>Behavior Expectations- (systems, strategies, procedures specific to the lesson, rules and expectations, etc.)</b> Students are expected to be attentive when going through examples and participate to the best of their ability when going through those examples. I will try to get as many of the students involved so there is not just one student answering all of the questions. They will also be expected to be respectful to others when doing their assignments. If they finish early, they know that they are to work on other assignments. If they are listening to music, they know that they must keep one earbud out and play the music at a reasonable volume.	
<b>Minutes</b>	<b>Procedures</b>		
<b>25</b>	<b>Set-up/Prep:</b> Have examples and assignments prepared		
<b>10</b>	<b>Engage: (opening activity/ anticipatory Set – access prior learning / stimulate interest /generate questions, etc.)</b>		

## Lesson Plan Template

	<p>To start the lesson, I will begin by stating what they should have completed by this class period, which is the assignments from last week and the video for this week. I will then state what the plan is for this week, which is a book assignment and a google form.</p>	
15	<p><b>Explain: (concepts, procedures, vocabulary, etc.)</b>            During this time, I will begin by asking if there were any specific questions that the students had from the video. Next, I will walk through a few more examples of combining like terms and the distributive property before the students start their assignment. I will make sure to go through examples with all operations occurring at least once, if not more. When walking through these examples, I will encourage the students to say the answers and I will basically be leading or facilitating, Once we are done going through those examples, I will then explain the assignments to them. I will encourage them to ask any questions and I will make sure to walk around the classroom as they are completing the assignment to check their understanding.</p>	
15	<p><b>Explore: (independent, concrete practice/application with relevant learning task -connections from content to real-life experiences, reflective questions- probing or clarifying questions)</b>            All of the independent practice and application will be their assignments. As I stated above, they will be encouraged to ask questions. If I notice there is something specific that a lot of students are getting wrong, I will take the time to walk through that problem on the board or one that is similar to it. I will also encourage them to check their answers throughout their work time so that they can see how they are doing and if they are understanding things correctly. I will have them check in with me or Mrs. Thompson once they have completed each assignment.</p>	
5	<p><b>Review (wrap up and transition to next activity):</b>            To wrap this lesson up, I will remind them that if they have not finished their assignments that they are to be completed by the due date. I will also remind them of their distant learning assignments such as Dreambox. Then, I will make sure they know they have another video to watch before the next class period and they are expected to take notes on the video as well.</p>	
<p><b>Formative Assessment: (linked to objectives)</b>  <b>Progress monitoring throughout lesson- clarifying questions, check-in strategies, etc.</b>            They will be formatively assessed when they are completing their homework in class. I will make sure to walk around the room and check their understanding through their assignments. They will also be required to show their assignment to me or Mrs. Thompson once they have completed it. I will be able to better know each student's understanding as they will be able to have that one-on-one time that they might not always get in a normal school year.</p> <p><b>Consideration for Back-up Plan:</b>            As a back-up plan, if I can tell that they are quite a few students who are not understanding the material, I will make sure to go through the assignment and ask them if there are certain problems that they are struggling with. This way, we can walk through them as a class instead of them not understanding and then struggling with the next section.</p>		<p><b>Summative Assessment (linked back to objectives)</b>  <b>End of lesson:</b>            The end of the lesson, the students will complete their homework assignment.</p> <p><b>If applicable- overall unit, chapter, concept, etc.:</b>            At the end of the chapter, they will have questions on their test regarding combining like terms and the distributive property.</p>
<p><b>Reflection (What went well? What did the students learn? How do you know? What changes would you make?):</b>            The students were a little shy right away about answering questions, but eventually started to jump in and answer. I think I did a really good job about allowing enough wait time that encouraged them to get involved, however, I need to do a better job of making sure all students are joining in and the discussion isn't dominated by one or two students. I also think I did a good job of checking the students' understanding by walking around and seeing how they were doing with their assignments. Most students had quite a few questions that allowed me to clarify some things they didn't understand in the video.</p>
